ABRASIVE POLISH

CUT

FINISH

Product description

Abrasive polish for the surface treatment of resins and composite materials used to remove minor scratches and small defects as well as swirl marks, which may come from previous coarse compounds. Through its combination of micro-abrasives and glossifiers, it has an excellent refinishing action on plugs and moulds. It removes light oxidation, yellowing, black and rusty streaks, tough water spots and pollution marks, restoring the original deep shine of the surface

HOW TO USE: please apply by variable speed polisher, selecting a medium-soft foam pad TT04. Pour a small quantity of compound on the polisher-pad. Let the polisher turn at low revolutions, speeding them up (800-1500 RPM) while spreading the paste with crossed movements. Work till you reach a very bright surface, always paying attention at not overheating the surface. Eventually, wipe it off with a clean cloth.

Physical properties

Colour: White

Physical form: Liquid-creamy

Odour: Light and pleasant

Explosion limit: None

Flammability: Not flammable

Stability: Tested after exposure to temperatures between - 15°C e + 45°C

IMPERFECTION LEVEL (HIGH 4 > LOW 1)
